Medical Device Regulations Conference Held

Some 84 device manufacturers, biodesign innovators, regulatory affairs specialists, quality assurance professionals and pharmacists attended the second annual Medical Device Regulations Conference at the University of Georgia. This conference was designed to provide educational and networking opportunities to help shape the future of medical device advancement from a regulatory science perspective.

Sponsored by the UGA College of Pharmacy’s Office of BioPharma Regulatory Affairs and the Food and Drug Administration, the conference focused on practical approaches to an evolving regulatory environment for devices that are used inside the body, everything from catheters and defibrillators to contact lens products.

Topics included an overview of European Union regulatory changes, compliance and quality agreements, advertising and promotion using social media for risk and compliance, risk management, universal device identifiers and successful response to warning letters.

More information and photos of attendees can be found on the College of Pharmacy website at www.rx.uga.edu or the conference website www.mdr-con.com
