Cancer Therapy Topic of StaR Conference

“Cancer Therapy: Making it Personal” is the topic of this year’s Southern Translational Education and Research Conference (STaR) Conference, September 6-7, at the Augusta Marriott Hotel. The four-hour continuing education program is sponsored by the University of Georgia College of Pharmacy and Georgia Health Sciences University (GHSU).

The program focuses on improving human health through scientific discoveries that can be translated into practical applications. Such discoveries typically begin at “the bench” with basic research, in which scientists study disease at a molecular or cellular level and then progress to the clinical level, or the patient’s beside.

Keynote speakers include Howard McLeod, Fred Eshelman distinguished professor and director of the Institute for Pharmacogenomics and Individualized Therapy at the University of North Carolina School of Pharmacy; and Samir Khleif, director of the GHSU Cancer Centre.

The conference will include state-of-the-art topics in clinical and translational science as well as opportunities for attendees to showcase their research and network to develop regional collaborations. Excellence in clinical and transnational science will be recognized during the conference through graduate student, post-doctoral fellow, young investigator and travel awards.
